

The screenshot shows the Docker Desktop application running on a Windows system. The main window displays the 'Containers' section with two running containers listed:

Name	Container ID	Image	Port(s)	CPU (%)	Last started	Actions
postgres1	aef3b15cb579	postgres	5432:5432	0.82%	34 minutes ago	[Edit, Stop, Remove]
hands-on2	-	-	-	0.19%	2 minutes ago	[Edit, Stop, Remove]

Below the container list, there are 'Walkthroughs' sections for 'Multi-container applications' and 'Containerize your application'. At the bottom, a terminal window titled 'localhost8000' shows the output: 'Hello World! I have been seen 2 times.'

System status at the bottom: RAM 1.01 GB, CPU 0.37%, Disk: 2.71 GB used (limit 1006.85 GB).
